

# **Fluorine Modified Acrylate Leveling Agent D358NFLR**

**(Similar to BYK-358NFL)**

## **First, Overview**

D358NFLR is a fluorine modified polyacrylate leveling agent that provides good recoatability. It provides excellent leveling and wetting of the substrate.

## **Second, Property**

Composition: Fluorine modified polyacrylate copolymer

Appearance: Nearly colorless transparent liquid

Specific gravity: 0.905-1.005 g/ml

Active ingredient: 70%

Solvent: xylene/trimethylbenzene

Application field: Solvent-borne coating systems

## **Third, Characteristics and uses**

Fluorine modified polymer levelling agent provides excellent leveling and recoatability.

It could improve the substrate wetting and prevent the shrinkage, pinholes and fish eye defects of the coating.

D358NFLR is stable and is difficult to hydrolyze. It has excellent light resistance and aging resistance. The product is non-volatile. Therefore, in addition to improved leveling, it has plasticizing effect. This leveling agent has good compatibility with most of common coating systems.

## **Fourth, Dosage and usage method**

The recommended dosage is 0.1-0.5% upon total formulation, it depends on the coating system.

Before usage determine the proper dosage via series of tests, check compatibility with coating system.

## **Fifth, Storage**

Keep in a cool and ventilated place. Keep the container tightly away from heat and fire. The storage temperature is 0 - 40 °C.

## **Sixth, Safety**

This product contains solvents. Be careful and avoid contact with skin and eyes. Please refer to the material safety data sheet for additional information.
