

# Leveling Agent D354R

(Similar to BYK-354)

## **Main components**

D354R is based on a special acrylic copolymer solution.  
Acrylate leveling agent with gas release capacity.

## **Physical indicators**

Appearance: colorless to light blue liquid  
Density: 0.900-0.990 g/ml  
Active ingredient: 50%  
Solvent: PMA

## **Recommended dosage**

Recommended dosage is 0.1-1.5% upon total formulation.  
D354R can be introduced at any stage during the manufacture, post addition is possible. It could improve leveling of the coating and gas release property of the system. D354R has a long-lasting effect and could prevent shrinkage of the coating during formation. D354R has no negative influence on the recoatability and interlayer adhesion. The additive slightly reduces the surface tension. D354R is a thermally stable additive.

## **Precautions and advantages**

D354R is suitable for high quality industrial coating systems with or without pigments.

## **Storage and packaging**

25KG and 50KG plastic drums.  
Store in a cool and dry place. When unopened, the storage period is 2 years.
