

## ASTRA DISP 406

---

Dispersant

### Description

ASTRA DISP 406 is a low molecular weight wetting agent. It has excellent wetting ability for many kinds of pigments. It could decrease the viscosity in the millbase and increase the pigment content in the pigment paste. It has excellent anti-flooding and anti-floating properties.

### Physical and Chemical properties

**Ingredient:** Polycarboxylic acid and polysiloxane

**Appearance:** Yellow transparent liquid

**Active part:** 50%

**Solvent:** Naphtha

### Specialty

1. ASTRA DISP 406 has excellent wetting ability of pigments during dispersion. It could avoid color separation effectively when combining titanium dioxide with other pigments in paints.
2. ASTRA DISP 406 contains a small quantity of a polysiloxane copolymer that could improve flooding and floating behavior and has which has no negative influence on the appearance of the coating.

### Application System and Dosage

ASTRA DISP 406 is recommended for alkyd systems, acrylic systems, amino baking varnishes, 2K polyurethane and epoxy systems.

Usually, it is recommended to introduce the additive before the dispersion stage during the manufacture with 0.5% to 2% dosage upon inorganic pigments and with 10% to 30% dosage upon organic pigments.

### Package

**25kg** metal pail.
