

ASTRA LA 1105NS

Non-silicone leveling agent

Description

ASTRA LA 1105NS is a nonionic modified acrylic copolymer used as a leveling agent. It is suitable for both solvent-borne and water-borne systems to provide excellent leveling to the system.

Physical and Chemical properties

Ingredient: Acrylic copolymer

Appearance: Yellow transparent liquid

Active part: 50%

Solvent: Dipropylene glycol monomethyl ether

Specialty

1. ASTRA LA 1105NS has good compatibility with resins, provides leveling in different systems.
2. ASTRA LA 1105NS could greatly decrease the surface tension of the system and improve the substrate wetting.

Application System and Dosage

ASTRA LA 1105NS is recommended for all water-borne and solvent-borne systems such as alkyd, acrylic acid, amino baking, etc.

The recommended dosage of the additive is around 0.1% to 1% upon total formulation. It could be introduced at a random stage during the manufacture.

Package

25kg metal pail.
